

Company Profile

RFShop Australia Pty Ltd (also known as RFShop) was established in 2009 by Peter Martin in Brisbane, QLD.

In 2016 David de Haaij took over the management of the business and relocated to Adelaide, SA.

The company has always been focused on providing quality service, connectors and coaxial cable assemblies.

Our vision is to keep customers connected using real-world wireless solutions by applying the following basic guidelines in our day-to-day operations;

- Provide high quality and creative solutions that will solve customers' wireless challenges
- Present simple and practical solutions
- Remove RF complexity from our customers' point-of-view

For all enquiries please visit www.rfshop.com.au, or send an email to enquiries@rfshop.com.au.

Products and Services

Coaxial Cable Assemblies

A key part of RFShop's business evolved around custom coaxial cables. We pride ourselves on being able to serve both consumer grade (known as budget friendly) and high-end precision cables, including multi-coax assemblies and test cables.

We don't expect our customers to know exactly what they need when the first enquiry is made. The RFShop difference is that we work with the end-user to understand the project or problem, identify the most suitable cable and connectors and deliver as soon as possible.

Whilst we pride ourselves on our speedy delivery, we expect quality to be more important than schedule and rather delay a shipment if it means making sure the outgoing cable assemblies meet our desired standards.

Connectors, Adapters and Passive Components

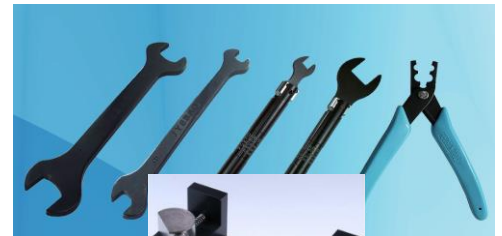

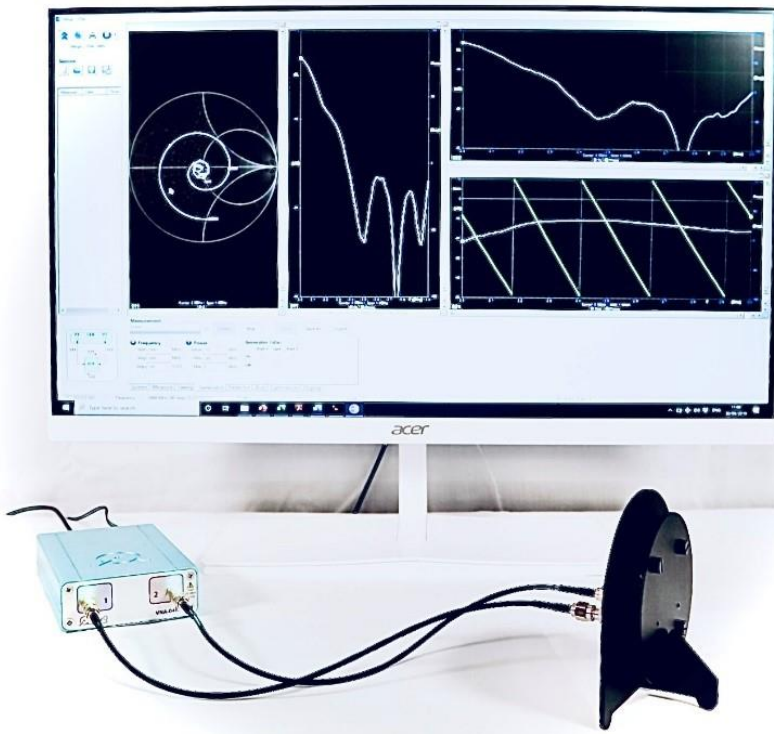

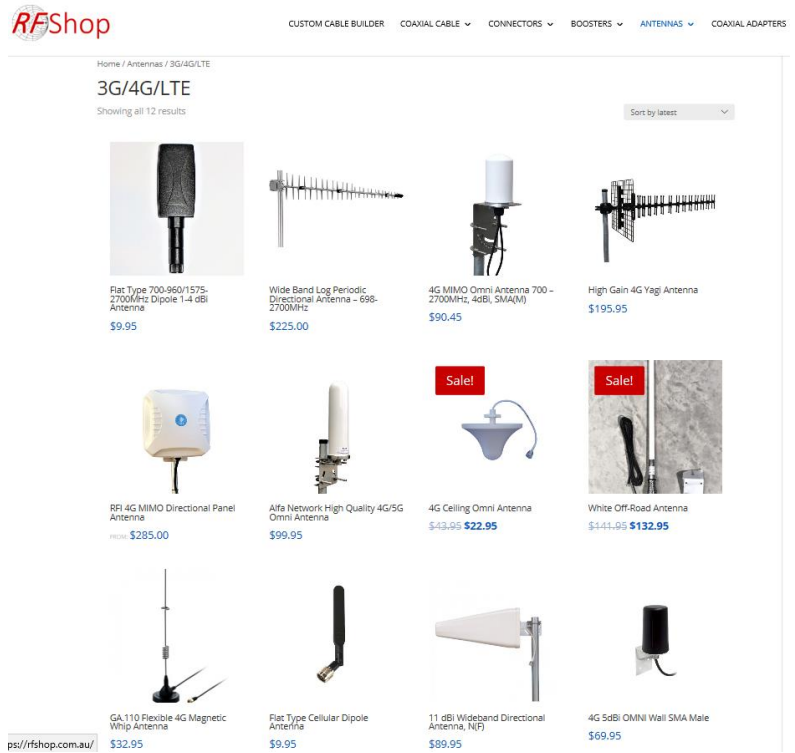

We understand that connectors, adapters and passive components need to be reliable and robust, yet not something for everyone to consider in detail on all projects. We provide guidance and options that will get our customers connected and remain so for the lifespan of the radio system involved.

Antennas

RFSshop's mission is to keep it simple. Our antenna selection is a true reflection of this approach, where we hand-pick antenna options based on what problem they would address and whether the product quality is acceptable. We do not offer more than what we believe is adequate to have a reliable wireless connection under typical scenarios.

Measurement and Assembly Tools

As an engineering company we understand the importance of using the right tools for the job. Assembling coaxial cables using the preparation and assembly tools offered via the RFSshop website makes it an easy and affordable exercise. The test equipment available via RFSshop offer a cost effective yet reliable and fast way to validate RF designs and production or cable assemblies.

WiFi Products

RFShop realises that WiFi has become a very important part of everyday Australians. It does not matter if you are a family at home, business owner or employee, gone outdoor camping or berthed in a local marina... keeping you connected is what we strive for.

We offer a range of WiFi repeaters, boosters and USB adapters to help you stay connected or improve your WiFi network.

In the scenario where the equipment is good, but the antennas need improving, we offer indoor and outdoor antennas to suit practically any network or customer requirement with high gain, low gain, simple or MIMO, single or dual-band omni and directional antennas on offer.
